Meet Assisto Bot !
Making your commute easier than ever

1. Assisto is Facebook Messenger Bot.
2. It answers user to location related queries like,

    2.1 "time to travel to Bellandur"

    2.2 Assisto gives you the estimated time it will take to reach the destination.

    2.3 Also, It gives user the option to book an Uber,along with suggesting the fare.

 3. The nodejs secure server is hosted on DigitalOcean Droplet.

4. Assisto can be accessed at - <u>Assisto - The Commute Bot</u>

WIP: Not Sure will be done
(facing issues ☹)

- Assisto can notify the user when the estimate time to reach is "less" (as set by user), also if user allows can book Uber for him.

- Assisto will timely notify user about his commute time from his current location to the locations which user usually takes at that hour.

- P.S: Assisto is a vital part of Jarvis. Tony Stark is already fond of him.
